Assignment: Mind Mapping

Description
Mind Mapping is an activity commonly used in Project and Problem Based Learning (PPBL) to help students dive into their research projects and start to think about what questions they need to answer and what knowledge and skills they need to acquire in order to complete their projects.

Instructions
As a group, start with a large sheet of paper and a handful of colorful markers. Write your research topic or question in the center and then start brainstorming what questions you need to answer and what knowledge and skills you need to acquire in order to complete your projects. Once you have a draft of this map, review and revise. Use this document to inform Research Mapping and Work Plan activities (see resources page).
